

# 关于launch文件drive\_imu报错解决方法

错误现象：

```
cannot connect to stm32!  
[dashgo_driver-1] process has died [pid 7095, exit code 1, cmd /home/zdh/dashgo_ws/src/dashgo/dashgo_driver/nodes/dashgo_driver.py __name:=dashgo_driver __log:=/home/zdh/.ros/log/0df369c0-186c-11ea-be70-84fdd1f9aa97/dashgo_driver-1.log].  
log file: /home/zdh/.ros/log/0df369c0-186c-11ea-be70-84fdd1f9aa97/dashgo_driver-1*.log  
[dashgo_driver-1] restarting process  
process[dashgo_driver-1]: started with pid [7113]
```

解决方法：

将port 改成：ttyUSB0

如果修改后再次运行还不能正常使用

且提示

```
False SerialException(msg.errno, 'could not open port %s: %s' % (ser._port, msg))  
SerialException: [Errno 13] could not open port /dev/ttyUSB0: [Errno 13] Permission denied: '/dev/ttyUSB0'  
Cannot connect to Stm32!
```

终端键入授权

```
tty20 tty34 tty48 tty61 ttys16 ttys3  
zdh@zdh-ThinkPad-L480:~/dashgo_ws$ sudo chmod +777 /dev/ttyUSB0  
[sudo] zdh 的密码：  
对不起，请重试。  
[sudo] zdh 的密码：
